PROFESSIONAL SUMMARY

BCA graduate with hands-on experience building full-stack web applications using React, Node.js, Express, and MongoDB/PostgreSQL. Skilled in REST API design, folder structuring, and implementing authentication systems. Eager to grow into system design and learn how to build applications that scale. Looking to join a team where I can contribute from day one and keep leveling up.

PROJECTS

AI Content Creation Platform | React, Node.js, Express, Gemini API, PostgreSQL | [Live](#) | [GitHub](#) | Nov 2025 – Present

- Built a full-stack AI platform integrating Gemini and Clipdrop APIs to provide text generation, image creation, and resume analysis tools in one application.
- Developed a Text Summarizer feature end-to-end, building the React UI, connecting it to the backend API, and rendering results in a clean, readable format.
- Implemented client-side UX improvements including real-time character counters, loading states, and disabled actions during API calls to improve user experience.
- Added dashboard filtering logic allowing users to browse and filter their AI-generated content by category (Summary, Article, Image), backed by a PostgreSQL database.

Weather Analytics Dashboard | React, Node.js, Express, Redis | [Live](#) | [GitHub](#) | Nov 2025 – Present

- Built a full-stack weather dashboard where users can search cities and view real-time conditions, 24-hour forecasts, and 7-day trends with interactive charts using Recharts.
- Built a Node.js/Express proxy backend with Redis caching to reduce redundant third-party API calls and improve response times.
- Implemented rate limiting middleware using express-rate-limit to protect the API from abuse, restricting traffic to 60 requests per minute per IP.
- Managed global UI state using Redux Toolkit, enabling instant Celsius/Fahrenheit toggling and city preferences across all components without extra network requests.

Food Delivery App | MongoDB, Express, React, Node.js | [Live](#) | [GitHub](#) | Apr 2025 – Present

- Built a full-stack food ordering app where users can browse menus, manage a cart, and place orders with a secure login system and order history tracking.
- Implemented dual-token JWT authentication (access + refresh tokens) with forgot password and email-based reset flow using Nodemailer.
- Integrated Cloudinary and Multer for cloud image uploads, and enforced input validation using Joi and express-validator.
- Containerized the full application using Docker and Docker Compose, ensuring a consistent development environment.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Redux Toolkit, Tailwind CSS, Responsive UI Design

Backend: Node.js, Express.js, REST API Design, MVC Architecture

Databases: MongoDB, PostgreSQL

Auth & Security: JWT, bcrypt, Clerk

AI & APIs: Gemini API, Cloudinary, Redis Caching, Third-party API Integration

Tools & DevOps: Git, GitHub, Postman, Docker, npm

EDUCATION

Bachelor of Computer Applications (BCA) | College of Applied Science, IHRD, Kozhikode | 2022 – 2025

- Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, OOP, Computer Networks

Higher Secondary (Class XII) | S.N Trust HSS, Chelannur | 2020 – 2022

- Scored 89% in Commerce stream with Computer Applications focus
